- General Ledger
- Accounts Payable
- Accounts Receivable
- Cash Management
- Data Porter
- System Manager
- eExecutive
- FRx

Additional Products

- Abra
- Unitime Time Keeping

FORBA Holdings, LLC is the largest Medicaid dental clinic management company in the nation. Starting in 2001, FORBA expanded to 64 news sites and that growth created a need for a new business technology solution.

When Jake West, Director of Information Systems, joined FORBA in 2005, the Human Resources Department had already realized that Excel spreadsheets were no longer cutting it. Finding a solution to accommodate their growth was imperative, so they began a search for an HR system. They later accepted that a full ERP solution was necessary.

In 2005, FORBA partnered with ASI to provide them with the MAS 500 ERP system and the Sage Abra HR system. These two solutions included everything FORBA needed to continue growing and succeeding. As Jake West mentions, "We wanted a system that could grow with us and so far so good."

FORBA appreciated that both MAS 500 and Abra were user friendly and that Abra accommodated their payroll, attendance, training and recruiting needs. FORBA was also pleased that MAS 500 successfully streamlined their Accounts Payable processes and provided the company with required financials.

Chris Devault from ASI recalls, "The Sage ABRA HR Suite gave FORBA the capability to manage over 1,850 employees spread across the nation from one central location. FORBA needed to track attendance, training & certifications and manage a very active applicant pool." Devault adds, "The HR functionality was necessary for FORBA but the technology platform and the ease of use was what made it stand out from other HR applications."

With Abra, FORBA is able to employ one person to do payroll for all 1,850 employees on a biweekly pay frequency. As West explains, "We just run everything lean and mean. The system does what we would have needed three or four other products to do."
