# Sage MAS 500 Compatibility and Resource Guide

Version 7.30

## Introduction

Sage MAS 500 is an enterprise level, multi-user client/server accounting software application and development platform. To correctly operate the software, certain requirements must be satisfied regarding the environment in which the software functions. These requirements include a database engine running on a server platform, a network backbone to handle remote data requests, and a client platform to present the user interface. The charts contained in this document represent supported compatibility of Sage MAS 500 with various platforms and third-party products. This information will help you properly configure and update the environment in which you operate Sage MAS 500.

Support is provided for the product combinations indicated because they have been proven to operate under either fundamental or full functional testing protocols. If you are using an operating system, SQL Server version, service pack, or product that is not listed in this guide, Sage Customer Support will not provide full support for the product combination being used in conjunction with Sage MAS 500. For more information on issues that should be addressed to Sage Customer Support, see the Introduction to Customer Support Web page located on the Sage Online Web site at: <http://support.sagesoftwareonline.com/cssintro.cfm>

This compatibility document should be thoroughly reviewed prior to the installation of Sage MAS 500, or implementation of any third-party products that are to be used in combination with this product. For information on known issues, refer to the Sage Online Knowledgebase at: <http://support.sagesoftwareonline.com>. For product overviews, see the Products page on the Sage Web site at: <http://www.sagemas.com/products/sagemas500>. For additional information and installation instructions, see the *Sage MAS 500 Installation and System Configuration Guide*.

## How to Use This Guide

This guide is divided into two sections: matrices containing compatibility information and text describing requirements and system configuration.

The compatibility information in the first section is in a table format. The matrix provided by each table details supported operating systems and database engines, the service packs and tested updates, as well as compatible add-on applications and tools. Review the information and notes.

The requirements detail the minimum configuration for servers and clients, as well as requirements for the systems you use with Sage MAS 500. Review this text carefully as it also contains licensing information on Microsoft Windows, Microsoft SQL Server, and Sage MAS 500.

## Document Style Information

Links to publications stored on Web sites and cross-references to information are referenced in this guide. Click the [underlined](#) text to access information on Web sites when you are connected to the Internet, or to access bookmarks to other sections of this guide.

# Sage MAS 500 Compatibility and Resource Guide

Version 7.30

## Compatibility Information

The following applies to the compatibility sections:

- Service Packs refer to updates from Microsoft or another third-party provider. In contrast, Sage delivers periodic updates to Sage MAS 500 that are known as Product Updates. Sage product updates are cumulative and require only the latest update to be installed.
- For additional guidelines and installation instructions, see the *Sage MAS 500 Installation and System Configuration Guide*. Also, refer to the Product Lifecycle Schedule for the version and platform retirement dates located at:  
<http://support.sagesoftwareonline.com/mas500/support/documents/versionretirement.cfm>
- Sage MAS 500 is normally regression tested only with generally available releases of Microsoft service packs or similar updates. Critical updates, patches, and hot fixes released by Microsoft that affect systems, or services necessary for operation of Sage MAS 500 may also be tested under functional testing protocols and will be noted in the matrix. Less severe updates are generally not tested or certified with Sage MAS 500. Review the patch information contained in this guide carefully. Additionally, refer to the Microsoft's article Why Service Packs are Better Than Patches located at:  
<http://www.microsoft.com/technet/archive/community/columns/security/essays/srvpatch.mspx>
- Sage MAS 500 is optimistically supported with updates available for supported operating system editions and components; however, if after due diligence, an operating system or component problem cannot be resolved, and that operating system contains untested updates, Sage Customer Support may defer to the supported updates within this guide. This general practice does not extend to SQL Server updates. Only supported updates should be applied to the SQL Server database engine and clients.
- Quality assurance testing is performed with the latest updates available for Sage MAS 500 with the latest supported updates to Windows, SQL Server, MDAC, and others listed in this guide. Previous updates to these components are not tested with current updates of Sage MAS 500. To ensure a compatible environment, apply the latest supported updates listed in this guide with the latest Sage MAS 500 update. The minimum service pack listed is generally that which was available when this version of Sage MAS 500 was initially released.

\*64-bit is not supported on SQL Server 2005 Express

# Sage MAS 500 Compatibility and Resource Guide

Version 7.30

## SQL Server Production Platform Notes

- Production systems are those used in the daily operation and data entry tasks performed within Sage MAS 500. Only the Express, Standard, and Enterprise Editions of SQL Server are supported in this role. For additional information on licensing, see [Hardware and Licensing Considerations](#).
- In production systems, Sage MAS 500 client should not be installed on the server where SQL Server is installed.
- Check the system requirements from Microsoft for Windows and SQL Server edition compatibility.
- Developer systems provide an enterprise platform on which to prepare, demonstrate, or test functionality modifications. The Developer Edition of SQL Server should be used for this purpose only and is not supported in a production environment.
- Demonstration or test systems are defined as those on which the Sage MAS 500 databases are installed for the purpose of demonstrating or testing functionality within the software.
- SQL Server 2008 Express is automatically installed when using the Sage MAS 500 Express Install when no version of SQL Server is present. This allows for demonstration or use of the functionality within the software without the need to install another edition of SQL Server. Use the Express Install for creating demonstration systems or production systems that will use SQL 2008 Express. You must choose a Windows Server edition of the operating system for the production SQL Server to service multiple clients (non-local).
- For SQL Server required settings, see [SQL Server Configuration Requirements](#) prior to installing SQL Server.

Version 7.30

<b>Microsoft Data Access Components (MDAC)</b>		
	<b>Service Pack</b>	<b>Remarks</b>
<b>2.8</b>	<b>SP1</b>	Installed with Sage MAS 500 client.

### SQL Server and MDAC Service Packs and Updates Notes

- Service packs and other supported updates for SQL Server or MDAC should be applied to the SQL Server and all clients; especially those on which you have installed the SQL Server Client Utilities.
- SQL Server 2008 R2 (Build 10.50.1600.1) is supported with August 2010 Product Update.
- Cumulative Update 7 for SQL Server 2008 SP1 (Build 10.0.2766.0) is supported with May 2010 Product Update.
- Cumulative Update 8 for SQL Server 2005 SP3 (Build 9.00.4285.00) is supported with May 2010 Product Update.
- Data Import Manager requires SQL Server Agent to run and is not available with SQL Express.

\*Supported on demonstration systems only.

# Sage MAS 500 Compatibility and Resource Guide

Version 7.30

## Internet Applications Server Platform Notes

- Production systems are those used in the inquiry and data entry tasks performed within the Sage MAS 500 Internet Applications. Terminal Services servers are not supported as production IIS servers.
- Demonstration or test systems are defined as those on which the Sage MAS 500 Internet Applications are installed for the purpose of demonstrating or testing functionality within the software. These are typically single-user systems employing the Express Edition of SQL Server.
- Review the [Sage MAS 500 Internet Applications Guide](#) for primary guidelines and installation instructions.
- The Internet Applications are not supported on a server running Active Directory Service (ADS). This service causes permission conflicts with certain components on which the Internet Applications rely. This is also inadvisable from a security perspective because of the nature of making this type of information available over the Internet.
- Internet Applications with IIS version 6.0 on Windows Server 2003 require Active Server Pages in your Web Services Extensions and to select the Run WWW service in IIS 5.0 isolation mode option in your Web site properties window. See the installation subjects in the Sage Online Knowledgebase for additional information.

Windows 2008 Terminal Services		X	X	
Windows 2008 R2 Terminal Service			X	
Citrix XenApp 4.5	X	X	X	Review compatibility with the Windows version you are using for Terminal Services.

# **Sage MAS 500 Compatibility and Resource Guide**

Version 7.30

## **Internet Applications Client Browser Notes**

- Service packs and patches from Microsoft generally do not affect the Internet Applications clients.
- The Internet Applications are designed to work by connecting from your local browser to the site over the Internet or an intranet. These applications are not generally designed for multi-user access from a single thin-client platform like Terminal Services or Citrix.
- Users should add the Web site you use for Internet Applications to their list of trusted sites. Also, edit the trusted zone security settings to enable scripting for controls not marked as safe for scripting.

### SQL Server Demo and Test Platform Notes

- When registering Sage MAS 500 demonstration, test, or development systems, select the proper license type in the Maintain Site task according to the following:
  - Demonstration – Select this license type if you are a Sage partner.
  - Developer – Select this license type if you are a Sage MAS 500 Customization Tools developer.
  - Test – Select this license type if you are a Sage MAS 500 user.
- SQL Server 2008 Express is automatically installed when using the DB Express Install and no version of SQL Server is present.
- Only 32-bit SQL Server 2005 Express is supported.
- Data Import Manager requires SQL Server Agent to run and is not available with SQL Express.

# Sage MAS 500 Compatibility and Resource Guide

Version 7.30

## Virtualization Support

The table below summarizes compatibility of Sage MAS 500 with virtual products.

<b>Company</b>	<b>Product</b>	<b>Compatibility</b>
<b>Citrix</b>	XenApp 4.5 (Presentation Server)	<b>Yes</b>
<b>Citrix</b>	XenServer 5.0	<b>Yes</b> (On all supported server OS)
<b>VMware</b>	VMWare Workstation 6.0	<b>Yes</b> (On all supported server OS)
<b>VMware</b>	VMWare Server 3.5 & 4.0	<b>Yes</b> (On all supported server OS)
<b>Microsoft</b>	Terminal Services Windows 2008 (32 & 64bit)	<b>Yes</b>
<b>Microsoft</b>	Terminal Services Windows 2008 R2 (64-bit)	<b>Yes</b>
<b>Microsoft</b>	Virtual PC 2007	<b>Yes</b> (On all supported client OS)
<b>Microsoft</b>	Hyper-V	<b>Yes</b> (Supported on Windows 2008 Server only)
<b>Microsoft</b>	Hyper-V R2	<b>Yes</b> (Supported on Windows 2008 R2 Server only)

# **Sage MAS 500 Compatibility and Resource Guide**

Version 7.30

## **Virtualization Support Notes**

- Testing has shown 12% to 15% performance degradation when running in virtual environments.
- Hardware and software requirements (minimum and recommended) for Sage MAS 500 apply to virtual environments as well.
- Third party products might not support the same virtualization platforms as Sage MAS 500. For clarification please check with the vendor.

## Sage MAS 500 Compatibility and Resource Guide

# Sage MAS 500 Compatibility and Resource Guide

Version 7.30

## Hardware and Licensing Considerations

The Windows Server, SQL Server, and Sage MAS 500 edition you use needs to correspond to your business requirements. Review the following information and edition limitations carefully before purchasing your systems and licenses.

### Windows Licensing

The Windows Server operating systems are available in different editions with each having different licensing costs and limitations. Review the following information on Windows Servers at Microsoft's Web site:

<http://www.microsoft.com/windowsserver2003/evaluation/features/comparefeatures.msp>

You should review the following documentation on Microsoft's Web site for additional details on licensing and purchasing Windows Server operating systems:

- [Windows 2003](#)
  - [System requirements](#)
  - [Pricing and licensing](#)
  - [Edition comparisons](#)
- [Windows 2008](#)
  - [System requirements](#)
  - [Pricing and licensing](#)
  - [Edition comparisons](#)
- [Windows 2008 R2](#)
  - [System requirements](#)
  - [Pricing and licensing](#)
  - [Edition comparisons](#)

The SQL Server and Sage MAS 500 licensing sections of this guide will also help you in determining your requirements. The [Comprehensive Product Licensing](#) section contains additional information on licensing a complete Sage MAS 500 solution to meet your needs.

# Sage MAS 500 Compatibility and Resource Guide

Version 7.30

## SQL Server Licensing

When choosing an edition of SQL Server, review the following feature comparison documentation on Microsoft's Web site:

<http://www.microsoft.com/sql/prodinfo/features/compare-features.msp>

For additional details on licensing and purchasing SQL Server:

- [Common SQL Server questions](#)
- [Feature comparison](#)
- [Supported feature by edition](#)
- [Choosing how to license SQL Server](#)
- [How to Buy](#)

# Sage MAS 500 Compatibility and Resource Guide

Version 7.30

## Sage MAS 500 Licensing

The platform and SQL Server edition you use normally corresponds to the Sage MAS 500 edition you license. Also examine limitations in the user range, available modules, companies and warehouses allowed. Upgrades to the SQL Server edition on which you can run Sage MAS 500 are also allowed.

	Sage MAS 500 Edition		
	Enterprise	Standard	Small Business
<b>Customer Profile</b>	250+ Employees \$75m and up	20 – 500 Employees \$25 – \$100m	10 – 100 Employees \$1 – \$50m
<b>User Range Permitted</b>	Any	<= 30	<= 10
<b>Database Platform</b>	SQL Server 2005/2008/2008 R2 Enterprise Edition or Standard	SQL Server 2005/2008/2008 R2 Standard Edition or SQL 2008/2005 Express	SQL Server 2005 or SQL Server 2008/2008 R2 Express ( <i>Included</i> )
<b>Typical Server OS Platform</b>	Windows Server 2003/2008 Standard, Advanced or Enterprise Edition	Windows Server 2003/2008 Standard Edition	Windows Server 2003/2008 Standard Edition
<b>CRM Modules</b>	eSalesforce, eCustomer, SalesLogix	eSalesforce, eCustomer, SalesLogix	eSalesforce, eCustomer
<b>Modules <u>Not</u> Available</b>	None	Source Code	Alerts*, Multicurrency*, Allocations*, Active Planner*, Software Development Kit (SDK), Source Code
<b>Maximum Number of Companies in System</b>	Unlimited	Unlimited	4
<b>Maximum Number of Warehouses in Each Company</b>	Unlimited	Unlimited	4
<b>FRx Designer Users Included</b>	4	4	1

\*Enhanced SQL Option required.

The Sage MAS 500 Small Business Edition automatically installs SQL Server 2008 Express when using the DB Express Install feature. This database engine is added to the system when no other SQL Server version is detected; therefore, you do not need to purchase SQL Server separately. Only one version of Microsoft SQL Server can reside on the operating system when using Sage MAS 500 Small Business Edition with SQL Server 2008 Express.

# Sage MAS 500 Compatibility and Resource Guide

Version 7.30

The Sage MAS 500 version you purchase can also be used with lower versions of SQL Server but not with higher versions unless you upgrade the SQL Server version with which you have licensed Sage MAS 500. For example, Sage MAS 500 Standard Edition with SQL Server Standard licensing can be used with SQL Server Standard Edition and Express, but not SQL Server Enterprise Edition; however, the Sage MAS 500 Standard Edition with the SQL Server Enterprise Edition license can be run on SQL Server Enterprise, as well as all lower versions of SQL Server. The Sage MAS 500 Small Business Edition is generally licensed for SQL Server 2005 Express only.

## Comprehensive Product Licensing

The following table presents compatibility information inclusive of the Sage MAS 500, Windows Server, and SQL Server editions without a separate SQL Server version upgrade. Recommended platform configurations are also included. Review the previous sections of this guide for licensing details, and [SQL Server Hardware Requirements](#) with the [Hardware Recommendation Matrix](#) for information on typical hardware configurations.

Sage MAS 500 Edition	Windows Edition	SQL Server Edition	IIS Recommendation	Recommended SQL Server Platform
Small Business	Windows Server 2003/2008/2008 R2 Standard, Advanced/Enterprise	Express	Windows Server 2003/2008/2008 R2 Web or Standard Edition	Windows Server 2003/2008/2008 R2 Standard Edition
Standard	Windows Server 2003/2008/2008 R2 Standard, Advanced/Enterprise	Standard Express	Windows Server 2003/2008/2008 R2 Web or Standard Edition	Windows Server 2003/2008/2008 R2 Standard Edition
Enterprise	Windows Server 2003/2008/2008 R2 Standard, Advanced/Enterprise	Enterprise, Standard, or Express	Windows Server 2003/2008/2008 R2 Web or Standard Edition	Windows Server 2003/2008/2008 R2 Standard or Enterprise Edition

## SQL Server Hardware Requirements

Sage MAS 500 has certain platform and hardware configuration requirements. Verify that your servers and clients meet the minimum hardware configuration outlined. Supported operating systems and their updates are detailed in the [SQL Server Production Platforms](#), the [Production Client Platforms](#), and the [Internet Applications Server Platforms](#) sections of this guide.

Windows XP Professional and Windows Vista can be used as a SQL Server for demonstration purposes only, these versions of Windows are not supported as production servers.

# Sage MAS 500 Compatibility and Resource Guide

Version 7.30

## Hardware

Sage recommends name-brand hardware over generic equivalents for both the client machines and servers. The benefit of quality, performance, and level of support from the mainstream manufacturers far exceeds the usually minor difference in cost over generic hardware. Most major manufacturers also have specification tools for OLTP or SQL servers that can be used to help define the hardware requirements.

In addition, Microsoft supports only hardware that appears on their Hardware Compatibility Listings (HCL). Verifying that your hardware appears on the HCL ensures Microsoft support. 64-bit Itanium processor is not supported by Sage MAS 500. For information on Microsoft's compatibility list, refer to the Microsoft web site at:

<http://www.microsoft.com/whdc/hcl/default.aspx>

## Minimum Requirements

The following table details guidelines for Windows, SQL Server, and Sage MAS 500 edition, and the hardware you typically require. You must meet or exceed these minimums.

Sage MAS 500 Edition	Windows Edition	SQL Server Edition (Default Edition)	Minimum Requirements	Recommended Minimum
Small Business	Windows Server 2003/2008/2008 R2 Standard, Advanced/Enterprise	SQL Server Express	Single Pentium III 450 512 MB RAM 1 GB disk space	Single Pentium Xeon or better 1 GB RAM 2 GB disk space
Standard	Windows Server 2003/2008/2008 R2 Standard, Advanced/Enterprise	Standard or SQL Server Express	Dual Pentium III 450 512 MB RAM 1 GB disk space	Dual Pentium Xeon or better 2-4 GB RAM 4 GB disk space
Enterprise	Windows Server 2003/2008/2008 R2 Standard, Advanced/Enterprise	Standard or Enterprise	Dual Pentium III 450 512 MB RAM 1 GB disk space	Dual Pentium Xeon or better (Quad capable) 4-8 GB RAM 10 GB disk space

Variations in SQL Server edition and Sage MAS 500 edition licensing are allowed. Licensing variations are typically used to upgrade the SQL Server edition. For example, Sage MAS 500 Standard edition can be purchased with a SQL Server Enterprise edition upgrade. The default SQL Server editions listed are those compatible with corresponding Sage MAS 500 editions and do not require a separate upgrade.

# Sage MAS 500 Compatibility and Resource Guide

Version 7.30

## Scaling Your Server

When reviewing your requirements for appropriate SQL Server hardware, consider the following:

### CPU

A single processor server generally services about five users with Small Business Edition. Current dual processor servers can service about 30 to 50 concurrent users under the Standard (30-user limit) or Enterprise (unlimited users) editions of Sage MAS 500.

Consider increasing processing power when servicing 50 or more users or when deploying under the following conditions:

- Distribution systems with greater than or equal to 30% of users.
- Manufacturing and distribution systems with greater than or equal to 30% of users.

### Increase Memory

The minimum requirement of 512 MB of memory services about 10 users. Consider increasing the amount of memory to use under the following conditions:

- You are servicing more than 10 users or deploying distribution or manufacturing systems.
- Database sizes grow, or are expected to grow to more than 1 GB.
- Performance monitoring indicates disk paging due to insufficient memory.

### Always Employ a RAID 1 or 10 Disk Array Configuration

Always employ a RAID 1 or 10 disk array configuration and abstract databases and objects. The following are more guidelines for this configuration:

- A minimum of 3 arrays for SQL Server objects are generally used:
  - One array for databases.
  - One array for transaction logs.
  - One array for the tempdb database (the tempdb is included with other logs).
- Add additional arrays when the performance monitor indicates drive bottlenecks to the following:
  - Abstract indexes for either all tables or table groups.
  - Group tables normally associated with heavy usage or specific modules, for example, tglAccount (read) and tglTransaction (write/read).

# Sage MAS 500 Compatibility and Resource Guide

Version 7.30

## Symmetrical Multiprocessing Environment (SMP) and Performance

SQL Server works best in a symmetrical multiprocessing (SMP) environment; the more processors in the pool, the better the query processing performance. The following are additional performance considerations:

- Use the maximum amount of physical memory available to the server within the edition limitations.
  - Server performance may decrease due to excessive paging of memory to disk when the server is not dedicated.
- Review how SQL Server uses memory in the SQL Server documentation; the more data and procedures you can cache in memory, the faster the general performance.
- The best overall performance is achieved when the server and clients have hardware resources above the specified minimums and the server is dedicated to Sage MAS 500 or SQL Server services.
  - Production servers generally include memory well above the specified minimum: greater allocations of processor cache, 2 to 8 CPUs, or CPUs of greater power (Hyper-threading or dual-core Xeon) multiple RAID 1 or 10 arrays; fast switches and multiple NICs, and a host of other advanced hardware.
  - The server configuration will affect server performance in data manipulation, form load, and response times at the client.
  - Variations in the amount of data, number of users, and modules in use can affect performance.

## Hardware to Scale Your Business

If you expect your business to grow, purchase hardware that can scale with your business. The following are more considerations:

- Instead of ordering a server limited to a maximum of two processors, order one with two processors that is expandable to four.
- Instead of specifying a memory configuration that fills all available slots, such as four modules with 256 MB of memory, select a configuration that allows you to easily add more memory, such as two modules with 512 MB of memory.
- Consider the limitations of the Windows and SQL Server editions you are deploying.
- Consider the best solution for your intended activity and SQL Server load when scaling your hardware.
  - Systems that surpass 100 users or process a large amount of data -- 30 GB or more database growth per year -- are considered large or higher volume sites.

# Sage MAS 500 Compatibility and Resource Guide

Version 7.30

## Support of Large Number of Users

Supporting a large number of users typically requires a powerful SQL Server with multiple CPUs and additional memory and disk arrays.

- A good solution may be a blade solution with an attached Storage Area Network (SAN) that can also include a SQL Server cluster solution for reliability and a Windows Terminal Services cluster to ease administration.
- The network infrastructure might include a minimum of 1 GB connection between the devices with a minimum of 100 MB of Ethernet backbone.
- A storage solution is very important to overall performance. For example, processing 50 GB of data per year (approximately 10 million General Ledger transactions with supporting data from subsidiary modules) requires the ability to house this data, and to adequately process user requests against the data.
  - This can include data requests for reports, Business Insights, or data entry and posting that can aggregate millions of rows of data.
  - Solutions generally start at a large Storage Area Network, with dozens of drives in a number of arrays with a RAID 10 (0+1) configuration. This allows the ability to separate database and log files, and to configure file groups comprising different database objects to different arrays, all to improve performance.
- Perpetual review of the server performance is typically required for all customer sites using SQL Server, especially large or higher volume sites.
  - This is primarily because the data and sometimes the environment are changing at a constant pace.
  - How this affects a specific environment and how best to compensate for the changes is best handled by a qualified database administrator (DBA) well versed in working with SQL Server and Sage MAS 500.

# Sage MAS 500 Compatibility and Resource Guide

Version 7.30

## Hardware Recommendation Matrix

Use the following matrix as an approximate guide to help in determining the basic hardware configuration to use for your Sage MAS 500 SQL Server. Typical usage scenarios are detailed with number of users, amount of data created per year, and module groups purchased.

Configuration	Processors	Memory	Minimum Data Drive Configuration	Sage MAS 500 Edition	SQL Server Edition	Server Operating System Edition
1-10 users < 1 GB data Core, Dist	1	1 GB	2 - 18 GB drives arrayed in RAID 1 configuration	Small Business	SQL Server Express	Standard
11-30 users 1-5 GB data Core, Dist, Mfg	2	3 GB	Minimum 6 – 18 GB drives arrayed in RAID 1 configuration	Standard	Standard	Standard
11–30 users 6-10 GB data Core, Dist, Mfg	4	4 GB	Minimum 6 – 36 GB drives arrayed in RAID 1 or 10 configuration	Standard	Enterprise	Standard
31–60 users 2-4 GB data Core, Dist, Mfg	2	3 GB	Minimum 6 – 18 GB drives arrayed in RAID 1 or 10 configuration	Enterprise	Standard	Standard
31–60 users 1-5 GB data Core, Dist, Mfg	4	4 GB	Minimum 6 – 36 GB drives arrayed in RAID 1 or 10 configuration	Enterprise	Enterprise	Standard
31–60 users 6-15 GB data Core, Dist, Mfg	4	4-8 GB	Multi-drive RAID 1 or 10 storage enclosure or Storage Area Network	Enterprise	Enterprise	Standard-Enterprise
61–100 users 6-15 GB data Core, Dist, Mfg	4	8 GB	Multi-drive RAID 1 or 10 storage enclosure or Storage Area Network	Enterprise	Enterprise	Enterprise

# Sage MAS 500 Compatibility and Resource Guide

Version 7.30

Configuration	Processors	Memory	Minimum Data Drive Configuration	Sage MAS 500 Edition	SQL Server Edition	Server Operating System Edition
61–100 users 16-30 GB data Core, Dist, Mfg	4-8	8-16 GB	Multi-drive RAID 1 or 10 storage enclosure or Storage Area Network	Enterprise	Enterprise	Enterprise
61–100 users 31+ GB data Core, Dist, Mfg	4-8	16 GB	Storage Area Network (SAN)	Enterprise	Enterprise	Enterprise
101+ users	4-8	16-32 GB	Storage Area Network (SAN)	Enterprise	Enterprise	Enterprise

## Additional Notes

- For more information, review the performance subjects in the Sage Online Knowledgebase, and general publications regarding SQL Server performance.
- These recommendations provide for generally adequate performance and require expertise in the configuration of hardware, SQL Server, and in working with Sage MAS 500. Review this information, the referenced documentation, and consult certified hardware and SQL Server professionals for advice on the appropriate configuration for your business needs.

## SQL Server Configuration Requirements

Sage MAS 500 requires that Microsoft SQL Server be installed on operating systems with supported service packs as specified in the [SQL Server Production Platforms](#) and [Operating System Service Packs](#) sections of this guide.

For a complete overview of the installation process, see the [Sage MAS 500 Installation and System Configuration Guide](#). The Sage MAS 500 Database Utilities are installed at the SQL Server or a workstation where the SQL Client Utilities have been installed. The Sage MAS 500 Database Utilities are used to create or upgrade Sage MAS 500 databases.

# Sage MAS 500 Compatibility and Resource Guide

Version 7.30

## Configuration Options

This section covers memory management and other SQL Server setting information. To view or change these settings, use SQL Server Management Studio. The amount and configuration of memory on the SQL server will affect system performance.

### Memory

Refer to the [Minimum Requirements](#) section of this guide for minimum and recommended memory configurations. Follow Microsoft's recommendations for a dedicated SQL server when using fixed memory.

General recommendations:

- Exceed minimum requirements (see [Minimum Requirements](#))
- Properly configure and tune your server (see [Scaling your Server](#))
- Dedicate your server (Microsoft article [Optimizing Server Performance](#))
- Allow SQL Server to manage the memory (Microsoft article [Server Memory Options](#))

For detailed information on configuring your SQL Server options, see article SQL Server Configuration Parameters by Microsoft Press located at: <http://www.microsoft.com/learning/books/default.mspx>. Observe the requirements noted in the [Minimum Requirements](#), and [Database Sizes and Settings](#) sections of this guide.

### Required Settings

The following table shows the supported Microsoft SQL Server configuration for Sage MAS 500.

Setting	Requirement
SQL Collations	SQL Server 2005: Dictionary order, case-insensitive, for use with 1252 Character Set. SQL Server 2008: SQL_Latin1_General_CP1_CI_AS
Default language for user	English
Allow nested triggers	Selected
Query governor cost	0
Y2K support	1950 and 2049
Minimum concurrent user connections	15 x <number of client connections>
Default Connection Options	None of the Attribute values selected
Use Windows NT fibers	Unselected

# Sage MAS 500 Compatibility and Resource Guide

Version 7.30

## Security and Domain Configuration

Sage MAS 500 supports both SQL Server and Windows Authentication security settings in SQL Server. You can create SQL Server users by creating Sage MAS 500 users or by granting access rights to users who have existing logins in domains or on the SQL Server. There are a number of methods that can be used in configuring security. For additional information, see the [Sage MAS 500 Installation and System Configuration Guide](#), and the System Manager Maintain Users and Maintain Security Groups Help system.

## Database Options and Sizing

You need to configure databases used by Sage MAS 500 to certain minimum sizes. The databases affected by these requirements are the following:

- SQL Server tempdb database
- SQL Server master database
- Application and Internet Application databases you use with Sage MAS 500

SQL Server allows you to define growth parameters to automatically expand your database. For more information on dynamic resizing in SQL Server, refer to the SQL Server Books Online.

## Master and Msdb Databases

The master and msdb databases in SQL Server should have at least 50 percent free space. You also should set the following options:

Setting	Recommendation
Database and transaction log	Automatically grow
	Unrestricted growth
Database	Simple

## Tempdb Database

Sage MAS 500 uses tempdb extensively; therefore, the tempdb size must be at least 1024 MB or greater depending on your data processing volume. You also should set the following options:

Setting	Recommendation
Database and transaction log	Automatically grow
	Unrestricted growth or limit to amount of free drive space
Database	Simple

# Sage MAS 500 Compatibility and Resource Guide

Version 7.30

## New Sage MAS 500 Databases

When running the Sage MAS 500 Database Creation Utility, the program recommends a minimum database size for the databases. For production environments, you should change the application database size to at least 500 MB.

Use SQL Server's automatic resizing features to ensure that databases can accommodate the volume of transactions you require, or manually resize the databases to avoid the processing delays the autogrow option can cause.

## Database Sizes and Settings

If you do not define growth parameters when you create the database, the databases and transaction logs cannot be smaller than the sizes specified in the Database Creation Utility. If you need to increase sizes later on, you can do so manually using the following recommendations:

Database or Log	Recommended Size or Increase
Application database	25 MB for every 5,000 expected General Ledger transactions (includes subsidiary module data)
Log size	Minimum 20% to 30% of the database size

Set the following options for the Sage MAS 500 application (\_app) and eCustomer (\_iapp) databases:

Setting	Requirement
Database and transaction log	Automatically grow in megabytes: 20
	Unrestricted growth or limit to amount of free drive space
Database	Recovery Model: Simple (when backup is performed once a day)
	Auto update statistics
	Torn page detection
	Auto create statistics
	Database compatibility level 90 for SQL Server 2005, or level 100 for SQL Server 2008
	Database chaining (required for all Sage MAS 500 databases)

# Sage MAS 500 Compatibility and Resource Guide

Version 7.30

## Existing Sage MAS 500 Databases (Upgrades)

If you are upgrading existing Sage MAS 500 databases, they need to meet the following minimum requirements:

Database	Amount of required available data space
Application database	100 MB of available data space

Review the Upgrading Existing Databases section of the [Sage MAS 500 Installation and System Configuration Guide](#) and the Sage Software Online Knowledgebase article titled How to upgrade Sage MAS 500 (Resolution ID: 144) for additional upgrade recommendations.

## Local Client Requirements

Sage MAS 500 requires Windows operating systems with supported service packs or other updates as specified in the [Production Client Platforms](#) or the [Operating System Service Packs](#) sections of this guide. If you are not using a supported edition and version of Windows, you need to update your Windows operating system.

For a complete overview of the installation process, see the [Sage MAS 500 Installation and System Configuration Guide](#). The Sage MAS 500 client is installed as a local client or thin client.

The local client workstation needs to meet the following general requirements:

- Pentium® IV class processor
- Minimum of 512 MB of RAM
- SVGA monitor and video drivers (minimum 1024 x 768 resolution)
- 400 MB of available disk space
- A supported version of Microsoft Windows (see [Production Client Platforms](#)) (Only English versions and locales are currently tested and supported.)
- A default print device for each Windows user account (required for Crystal Reports)

# Sage MAS 500 Compatibility and Resource Guide

Version 7.30

## Microsoft Office Compatibility

The following Microsoft Office applications are required for the following Sage MAS 500 applications or features. For version compatibility, see the [Third-Party Application](#) section of this guide.

Sage MAS 500 Application	Microsoft Office Application
Business Insights (export functions)	Microsoft Excel, Word
Data Migrator (Assisted Company Setup)	Microsoft Excel
Data Porter	Microsoft Excel
Document Email	Microsoft Outlook*
Business Insights Dashboard	Microsoft Office
Export grid functionality	Microsoft Excel
Sage MAS 500 Office	Microsoft Office

\* Optional. Also supported with SMTP

If you have not installed any Microsoft Office applications, you can install them after installing the Sage MAS 500 client software, but you will need to register the MS Office DLL manually. For instructions, refer to the Registering the DLL File for Microsoft Office section of the [Sage MAS 500 Installation and System Configuration Guide](#).

# Sage MAS 500 Compatibility and Resource Guide

Version 7.30

## Microsoft Office Web Components Compatibility

The following Microsoft Office and Microsoft Office Web Components are required for the following Sage MAS 500 applications or features. For additional version compatibility information, see the [Third-Party Application](#) section of this guide.

Sage MAS 500 Application/Function	Web Components Version	Display	Manipulate
Business Insights Data View	XP	X	X
	2003	X	X
Business Insights Pivot Table	XP	X	X
	2003	X	X
Business Insights Chart	XP	X	X
	2003	X	X

You can install versions of the Web Components that differ from your Microsoft Office version, but the Microsoft Office version controls your ability to work within the application. For example, you can display pivot table data elements with Microsoft Office 2003 and Web Components 2003, but you cannot manipulate those data elements.

You can download the Microsoft Office Web Components, or activate this feature using instructions from Microsoft. Click the link below that corresponds to your Office version.

- [Microsoft Office XP](#)
- [Microsoft Office 2003](#)
- [Microsoft Office 2007](#)

You must have a license to use the Microsoft Office Web Components. For information on configuring the web components settings, see the Microsoft article [Managing Office Web Components](#).

# Sage MAS 500 Compatibility and Resource Guide

Version 7.30

## Terminal Services Thin Client Requirements

Sage MAS 500 supports the use of Microsoft Terminal Services and Terminal Services RemoteApp to enable multiple user sessions to run concurrently on a shared server. You can use one Windows user account to establish multiple Windows Terminal sessions from the same terminal or different terminals.

This section explains the requirements for using Sage MAS 500 with Terminal Services. For more information, see the following:

- For instructions on setting up Sage MAS 500 to use Terminal Services and Terminal Services RemoteApp, see Client Installation in the [Sage MAS 500 Installation and System Configuration Guide](#).
- For general information about using Terminal Services or Remote Desktop, see the [Terminal Services](#) or [Remote Desktop](#) documentation from Microsoft Web site.

## Hardware

The server where Terminal Services is running needs to meet the following requirements:

- Dual Intel Pentium® IV class or higher processor (This allows you to add capacity as the number of users grows. Processor and memory requirements scale linearly.)
- A minimum of 512 MB of RAM plus an additional 128 MB for each typical user
- A minimum of 500 MB of available disk space
- SCSI hard drives (caching array recommended)
- A supported version of Microsoft Windows (see [Production Client Platforms](#)) (Only English versions and locales are currently tested and supported.)

Consider the following recommendations for best performance:

- High-performance and multiple network interface cards (NICs) for user connections
- Fast switch (1 GB recommended) between the SQL Server and Terminals Services server (Consider separate blades for SQL and Terminal Services on one blade server.)
- A microprocessor-based multi-port asynchronous communications adapter to reduce interrupt overhead for dial-in users
- Reduce network traffic by turning off the Sage MAS 500 startup logo with Business Desktop Configuration Utility (For information about using the Client Configuration Utility, refer to the [Sage MAS 500 Getting Started Guide](#).)
- Employ the [Remote Desktop Client](#) available from Microsoft Web site

# Sage MAS 500 Compatibility and Resource Guide

Version 7.30

## Terminal Services RemoteApp

Starting from version 7.3, MAS 500 supports Terminal Services RemoteApp.

Terminal Services RemoteApp (TS RemoteApp) enables organizations to provide access to standard Windows®-based programs from virtually any location to users with computers running Windows Vista, Windows 7, Windows Server 2008, Windows Server 2008 R2, or Windows XP with Service Pack 3 (SP3). TS RemoteApp is also available to users with computers running Windows XP with Service Pack 2 (SP2), Windows Server 2003 with Service Pack 1 (SP1), or Windows Server 2003 with SP2 that have the new Remote Desktop Connection (RDC) client installed.

RemoteApp programs are programs that are accessed remotely through Terminal Services and appear as if they are running on the end user's local computer. Users can run RemoteApp programs side by side with their local programs. A user can minimize, maximize, and resize the program window and can easily start multiple programs at the same time. If a user is running more than one RemoteApp program on the same terminal server, the RemoteApp programs will share the same Terminal Services session.

## Usage

When planning your Terminal Services implementation using Terminal Services or Terminal Services RemoteApp, only one instance of Sage MAS 500 can run under each Windows user account. You can have more than one user running Sage MAS 500 on Terminal Services; however, the users must have different Windows user accounts. You cannot use a Windows user account more than once to establish a Terminal session and run Sage MAS 500.

## Licensing

You may need to change the configuration of Terminal Services to enable additional users to use the Sage MAS 500 client software. By default, Terminal Services is installed as an administrator server. Configure it as an application server to use it as a production client.

To access Terminal Services, the client system needs to have a Terminal Client Access License (TCAL). You need to install Terminal Services Licensing and purchase Terminal Services licenses from Microsoft; otherwise, you are limited to two administrative connections. See the Microsoft web site for information on [Terminal Services licensing](#).
